LET'S SELL DAIRY RECORDKEEPING

As recommended by the Extension Section of the American Dairy Science Association, a nationwide dairy recordkeeping campaign will be inaugurated during January 1959. The U. S. Department of Agriculture and the Agricultural Extension Services of the various States are cooperating in leading the campaign to call to the attention of all dairymen the value of dairy recordkeeping. All media will be used, meetings, letters, farm press, radio, TV, etc.

Why have a campaign? Here are some of the reasons:

1. Nine out of ten dairymen do not keep records on their cows. The National Cooperative Dairy Herd Improvement Program provides a plan suitable for any dairy farmer in obtaining basic information on his herd and cows. On January 1, 1958, only 10.3 percent of the total cows in the U. S. were enrolled in these plans, including (1) DHIA, (2) Owner-Sampler, and (3) Weigh-a-Day-a-Month.
2. Technological developments (bulk tanks, pipeline systems, milking parlors, labor-saving equipment, etc.) are increasing the investment per herd or per cow necessary for an efficient dairy operation. These revolutionary changes, along with others, make it all the more important that dairy farmers have basic herd information upon which to base their management decisions.
3. Dairy records are essential in assisting dairy farmers with their breeding, feeding and management problems. Year after year experiences show that the dairyman who keeps records on his herd and cows is in the best position to improve his herd and increase his dairy profits.
4. Culling unprofitable cows is one of the most effective ways of improving efficiency of production. It is estimated that nearly one-third of the cows of the nation do not fully pay their feed bill and their share of overhead and labor. Production and feed records quickly show up the loafers.
5. Many people, extension workers, DHIA supervisors, AB technicians, Vocational agriculture instructors, bankers, milk plant fieldmen, feed and farm supply salesmen and numerous others who have daily personal contact with dairymen, have opportunities to discuss dairy records with dairy farmers. A nationwide campaign will make it possible to coordinate the efforts of every one in selling dairy recordkeeping to more dairymen.

MAKE DAIRYING PAY

THE RECORD

WAY

LET'S SELL DAIRY RECORDKEEPING

DHIA PROVED-SIRE RECORDS TABULATED IN OCTOBER 1958

Following is a list of 342 sires whose records were tabulated or retabulated by the Animal Husbandry Research Division in October 1958. Production records used in proving DHIA sires consist of 305-day lactation records standardized to a mature equivalent twice-a-day milking basis.

An asterisk at the end of a sire's registration number indicates a retabulated record. The asterisk may be followed by any number from 1 through 15 (i. e., *12) to indicate in which of the 15 printed lists his previous record appeared. Or the asterisk may be followed by the month and year (i. e., *May 51) of the DHIA letter in which his previous record appeared. Two asterisks following the sire's registration number, or following reference to a previous listing, indicate that the proved-sire tabulation or retabulation was requested by one of the States.

In case records from more than one herd were used, the reference is to the herd from which production records for the largest number of the sire's youngest daughters were reported. If the sire has been used in an artificial-breeding association, the name of the association is given.

Proved-sire records consisting of fewer than 10 comparisons are indicated as "preliminary proofs" because these records may be significantly changed when additional comparisons become available and are included in the proved-sire records.

Proved-sire records consisting of fewer than 25 comparisons with daughters resulting from artificial breeding are indicated as "preliminary AB proofs" because these records may be significantly changed when additional comparisons become available and are included in the proved-sire records.

To make the most intelligent selection of a sire, the dairyman should use these proved-sire records to single out the most promising sire and then make every effort to supplement these data with additional information gathered from the herds in which the dams and daughters made their records. Particular attention should be given to the feeding practices and environmental conditions under which the records were made, in order to be assured that the records of the daughters were not made under more favorable conditions than those of the dams or vice versa. It is especially important to determine that there has been no selection of daughters in making the comparison.
